

## Using Email to enable EDI

With over 20 years' experience in doing EDI (Electronic Data Interchange), the team at Neller Connect are experts in our field and are respected for our innovative solutions and responsiveness to our Customers' requirements. EZYB2B enables businesses of all sizes to trade electronically with all of their EDI-capable customers and suppliers.

### THIS SOLUTION IS DESIGNED FOR SMALL BUSINESSES THAT:

- ✓ Use MYOB or Quicken (or similar) as their main business system
- ✗ Have trading partners asking them to receive Orders/Invoices and send Invoices/Orders through Web Forms or Web View
- ✗ Have to print and/or re-key those documents into their business system, and/or
- ✗ Still use facsimile and snail mail technology
- ? Find that the letters "EDI" and words "Electronic Trading" are gobbledegook and intimidating.

### WILL THIS MAKE IT EASIER TO DO BUSINESS WITH OUR LARGER CUSTOMERS OR SUPPLIERS?

The EZYB2B Emailed EDI solution is specially designed for small businesses with low transaction volumes. EZYB2B sends and receives Orders and Invoices from and to multiple trading partners **through your email system**. And we'll take care of problems such as your trading partners having their own branch codes and product codes. It's all part of our service and core capability.

### SO HOW DOES IT WORK?

**Inbound Orders or Invoices** are sent to the Neller Connect eHub by your trading partners using whatever communications method they choose. The documents are then translated into the format your system requires and automatically attached to an email message addressed to your Company. All you have to do is open the email to save the attachment and import the files into your business system.

**Outbound Invoices or Orders** are exported from your system and attached to an email which is addressed to your mailbox on the Neller Connect eHub. The attachments are automatically detached and translated within the eHub from your business system format into the format(s) required by your trading partners and transmitted to them by their chosen communications method.

### WHAT BENEFITS CAN WE EXPECT?

- ✓ Integration eliminates costly re-keying and having to access multiple web sites to work with Web Forms or Web View
- ✓ Reduces the uncertainty arising from using faxes and delays from snail mail for crucial business communication
- ✓ It will make it much easier for your trading partners to do business with you
- ✓ The cost of EDI is far less per transaction than other methods.

EZYB2B's Emailed EDI solution allows you to do true EDI at a fraction of the cost
