

# Supplier Portal (Web-based EDI)

With over 20 years of experience in Electronic Data Interchange (EDI), our team at Neller Connect are experts in our field and are respected for our innovative solutions and responsiveness to our Customers' requirements.

EZYB2B enables your business, regardless of size, to trade electronically with all your suppliers and EDI-capable customers.

The EZYB2B  
Supplier Portal  
allows you to do  
true EDI with **ALL**  
your suppliers.

## DESIGNED FOR BUSINESSES THAT HAVE:

- Many suppliers
- High volumes of invoices to scan, print and/or re-key
- Resistance to EDI from suppliers

## DO EDI WITH ALL YOUR SUPPLIERS

The EZYB2B Supplier Portal is specially designed for businesses with a large number of suppliers that have low transaction volumes. It works with your existing EZYB2B solution to extend your EDI reach to those suppliers who have yet to embrace EDI.

## HOW DOES IT WORK?

Your EZYB2B server **collects purchase orders** from your ERP system and delivers them to the EZYB2B Supplier Portal. The portal stores and displays the orders in a format that can easily be viewed by your suppliers.

Your suppliers login to the portal to **securely view their orders** and, once fulfilled, to convert the orders into electronic purchase invoices. The invoices are then automatically sent to your EZYB2B server for processing and integration just as you would expect from a fully EDI-capable supplier. You'll never notice the difference.

Your EZYB2B server **converts the electronic purchase invoices** from the portal to your preferred integration format for automatic loading to your ERP or other 3rd-party system.

## WHAT BENEFITS CAN YOU EXPECT?

- Your cost of re-keying and duplication of invoice processing is eliminated.
- Encourages suppliers to consider the adoption of true EDI capability.
- The transaction cost of EDI is far less than that of other methods.
